

a.pds
m.pds

①

23. \$ ls [t-yz]?? t u v w x yz

t11 y31 t31

z11 z41

t00 x41

①

24. \$ ls m????.pds

marsh.pds

①

25. Replace the following 3 Unix commands with only one command to achieve exactly the same result:

\$ chmod g+w calendar

\$ chmod g-r calendar

\$ chmod g-x calendar

\$ chmod g=w calendar

②

26. Replace the following 2 Unix commands with only one command to achieve exactly the same result:

\$ cp srcF trgF <RT>

\$ rm srcF <RT>

\$ cp srcF trgF && rm srcF

cp srcF trgF ;

Two

27. Replace the following 4 Unix commands with only one command to achieve exactly the same result:

\$ cd export

\$ cd home

\$ cd users

\$ cd ali

\$ cd /export/home/users/ali

③

The command that shows doc1 first when you come to the end of it; it shows doc2 and finally shows doc3 is:

- a. \$ echo doc1 doc2 doc3
 b. \$ pg doc1 doc2 doc3
 c. \$ cp doc1 doc2 doc3
 d. \$ mv doc1 doc2 doc3

14. The command that includes giving **other read & write** permissions on **memo** is:

- a. \$ chmod 664 memo
 b. \$ chmod 666 memo
 c. \$ chmod 744 memo
 d. \$ chmod 144 memo

15. One of the following equivalencies is **valid** with regard to permissions in Unix.

- a. ugo+rx equivalent to ugo=rwx
 b. ugo+rw equivalent to 466
 c. a+rx equivalent to 766
 d. g+rx equivalent to 757

16. One of the following equivalency is **valid** with regard to permissions in Unix.

- a. o+rw equivalent to o=rw
 b. g+rw equivalent to g=rw
 c. a=rwx equivalent to 777
 d. a+rx equivalent to 755

17. With regard to Unix permissions on directories, the ability to delete a file from a directory does not depend on whether one has write privileges for the file, but on whether one has write privileges for the directory.

- a. True
 b. False

18. One of the following commands makes **ali** the new owner of **adminDir** including all of its nested contents of subdirectories and files up to the leaves level.

- a. \$ chown ali adminDir
 b. chown -R ali adminDir
 c. chown -B ali adminDir
 d. Non of the above

19. The correct command to send the contents of **memoFile** to **ali** as an email message is:

- a. \$ send ali < memoFile
 b. \$ mail ali < memoFile
 c. \$ cat ali < memoFile
 d. \$ mail ali > memoFile

→ Using the **ls** command, assume that the contents of your current directory are:

	LINES.11	LINES.idx	PAGES.dat	PAGES.idx	LINES.sd
21xx	marsha.pds	p10	p101	p11	t11
acct.pds	marsh.pds	p105	p100	p21	y31
a.pds	m.pds	e1ven00	p1000	p2100	t31
ac.t					x41
					s00

→ Write down the output of the following eight commands:

20. \$ ls *11

p11 t11 z11

LINES.11

21. \$ ls LINES.??

LINES.11

LINES.idx

LINES.sd

1. Every process in Unix is created with three standard **default files**, these are:
a. I/O & Errors b. Bourn, Korn & C Shell c. cd, ls & pwd ~~d. None True~~

2. Which of the following is considered a valid **file name** in Unix:

- a. home_work b. homework c. home.work ☒ d. All True

3. The Unix command that lists **type of files** marked with (*, @, or /) is:

- a. \$ ls -l ☒ b. \$ ls -F c. \$ ls * d. \$ ls -a

4. The Unix command that lists **tree files** from the current directory, including nested sub-directories and files up to the leaves level is:

- a. \$ ls -l b. \$ ls -F ☒ c. \$ ls * d. \$ ls -a

5. The Unix command: **\$ mesg -n** has the effect of making a terminal:

- a. Not responding to write ~~b. Not responding to talk command.~~
☒ c. Not responding to wall ☒ d. All True.

6. In Unix, the **wild card (*)** represents _____ characters.

- a. One b. Two c. Three ☒ d. Any number of

7. The system administrator uses _____ to tell users something at login time:

- a. talk b. write c. wall ☒ d. motd

8. On the Unix file system to move from any spot to your **Home directory** use:

- a. \$ cd / b. \$ cd \ ☒ c. \$ cd ~ d. cd ..

9. The command that matches lines that begin with a word that starts with a letter, upper or lowercase, followed by a digits or underscores

- ☒ a. \$ grep '^ [a-z] [A-Z0-9_] *' b. \$ grep '^ [0-9a-zA-Z] [_] *'
c. \$ grep '^ [A-Z] [a-zA-Z0-9] *' ☒ d. \$ grep '^ [a-zA-Z] [0-9_] *'

10. The easiest way to display the expression "Unix is Fun" on your screen is to use:

- a. \$ cat "Unix is Fun" b. \$ cp "Unix is Fun"
☒ c. \$ echo "Unix is Fun" d. \$ pg "Unix is Fun"

11. The effect of the command: **\$ cat myFile > bkupFile**

- ☒ a. Copies the contents of myFile to bkupFile; if myfile.bkup does not exist, Unix will create it
~~b. Copies the contents of myFile to bkupFile; if bkupFile does not exist, Unix gives an error message.~~
c. Copies the contents of myFile to bkupFile; if bkupFile does not exist, Unix ignores the command.
d. None of the above true

12. The command **cat < memo1 > mymemos** has different effect to issuing this command:

- \$ cat memo1 > mymemos**
a. True
☒ b. False
